E1iz@b3ths_D1g1t@_N0t3b00k_Intro_ Class

Table of Contents:

1. Class Notes
2. Reflections
3. On markdown syntax

**Class Notes

My initial feelings coming into class:

- I chose this class because it presented the opportunity to learn something completely outside of my wheelhouse!
    - I typically select classes that are well-aligned with my pre-existing skillset; my chaotic Summer completing an Ingenium practicum where all of our plans had to change on a dime showed me that sometimes we can learn more from doing something that involves a lot of managing uncertainty and failure than we can from doing the things that come to us somewhat easily.
- After we discussed how we connect to this material, I remembered that I used to copy and paste code into my Tumblr blog to change the appearance and layout. Perhaps I'm not as inexperienced as I thought!

Class Notes

- Digital histories is a way of connecting with audiences and building communities across boundaries of place/time; allows you to find your "people" for your project
- Allows us to explore "what ifs" that we otherwise can't test
    - Fex: Agent-based modelling can be a tool of necromancy
        - giving models a set of behaviours according to a given set of cultural/social/historical norms, including individual-based characteristics in wide swaths
        - Idea a heterogenous set of agents will interact and something real will emerge out of it - if rules based on roman social customs, than what you produce has something to do with roman social customs
        - for example, can change economic conditions to see how people respond
- The process of learning in coding is just as much about the ways things break as what goes right... your practice is about a willingness to be vulnerable about your process, make mistakes

    - harder to do this when your identities/presentations are the subject of internet vitriol. -how can we reframe our mistakes?
- Digital history as a way of connecting not just with the past, but with places humans have no business being, about access
- Digital humanities, like most subjects, has had its own turns/waves.
    - In 70s, criticized for turning people into numbers (too qualitative)
    - In 90s, web emerges and creates new possibilities
        - the valley in the shadow of death
        - "Name of the Rose" digital library with rooms that correspond with geographic relationships
    - In 2000s, phrase "digital humanities" is coined
        - about examining not only how we affect digitizing, but how it affects us back!
        - spreadsheets, for example, reveal so much about us and our choices. Our digital approach = our methodology
            - Look at acts of transformation, not just final product
- FAIL GLORIOUSLY !!!!!
    - Paradata is your embarrassing, real story of progress
    - Can work in community rather than as a heroic, lobely individual.
    - Look at reviews in DH as a resource
- And relation between data/things is a network. What is missing can also tell you just as much

Our goal: avoid dead research and learn coding as a matter of literacy!

**Reflections

My main take-aways:

- about the process of learning, revelations as we TRY
- the opportunity to learn in a safe environment where you won't get ripped apart for being a woman trying something online
- choices in digital history can be more revealing than final product and stated intentions

**Markdown Syntax

Click on headings to see syntax from Stackedit
My Stackedit: https://stackedit.io/app#

First level heading

Second level heading

Third level heading

Fourth level heading

First level heading

Second level heading

- paragraphs must be separated by an empty line.
-
    - or _ italicizes
    - *hello*
    - *hello*
- ** or __ bolds
    - **hello?
    - __hello?
-

Formatting list

- item one is just ONE * sign
    - indentation allows nesting in list
- item 2

Numbered list

1. one
2. two
3. three

Code snippets

Should try representing differently than rest of doc... markdown doesnt disting between fonts so wrap in black ticket or
. `<br />`

start with three black tickets

```
SEE THE BOX GOT RENDERED? END IF WITH THREE TICKS TOO

<html>
    <head>
```

```
        <title>Website Title</title>
    </head>
    <body>
    </body>
</html>
```

blockquotes

add > before a paragraph for a blockquote

> hey how's it going?
> test text

links

Links enclosed in square brackets first with url, alt text in round brakcets

[https://programminghistorian.org/en/lessons/getting-started-with-markdown]

footnote:
Let's check out stackedit [StackedIt] [1]

[1] [https://stackedit.io/app#]

images

use ! to reference an image with alt-text square brackets, followed by image url, then optional title. embedded into a rendered HTML page

Tables
using pipes and hyphens
**```

Heading 1	Heading 2	Heading 3
Row 1, column 1	Row 1, column 2	Row 1, column 3
Row 2, column 1	Row 2, column 2	Row 2, column 3
Row 3, column 1	Row 3, column 2	Row 3, column 3

```
| Left-aligned | Centered | Right-aligned |
| :-------- | :-------: | --------: |
```

```
| Apples | Red | 5000 |
| Bananas | Yellow | 75 |
```

Can use pandoc to convert to make acceptable for publishers/individuals used to word
